RE: ASTM E-84 Classification of Tyvek® T-10 Styles

To Whom It May Concern:

I am responding to your request for flammability test information for DuPont Tyvek® T-10 styles.

DuPont™ Tyvek® T-10 style 1085D was tested per ASTM E-84, "Standard Test Method for Surface Burning Characteristics of Building Materials", using the unadhered specimen mounting option. Based on the test results, 1085D was assigned a Class I or A rating.

The test results can be extended to all T-10 styles (i.e., styles beginning with 10), as they are all compositionally equivalent; the only difference being basis weight.

The information provided herein corresponds to our knowledge on the subject at the date of its publication. This information may be subject to revision as new knowledge and experience becomes available. The data provided fall within the normal range of product properties and relate only to the specific Tyvek® styles as sold by DuPont and does not apply to use of these styles in any process or in combination with any other material, unless expressly indicated otherwise. The data provided should not be used to establish specification limits or used alone as the basis of design; they are not intended to substitute for any testing you may need to conduct to determine for yourself the suitability of a specific material for your particular purposes. Since DuPont cannot anticipate all variations in actual end-use conditions DuPont makes no warranties and assumes no liability in connection with any use of this information. Nothing in this publication is to be considered as a license to operate under or a recommendation to infringe any patent rights.

I hope that this satisfies your request. Please feel free to contact me if additional information is needed.

Sincerely,

A handwritten signature in black ink that reads "Christi S O'Leary". The signature is written in a cursive, flowing style.
