product resources

thinwall is a flexible wall measuring only 90 mm (3.5 inches) wide and reaching 1.83 meters (6 feet) high. Unlike its sibling product, softwall, thinwall is not intended to be freestanding, but is intended as a sculptural wrap for existing structures or cabinetry.

Design by Stephanie Forsythe + Todd MacAllen

The internal honeycomb structure and pleated surface break up reflected sound and provide acoustic absorption to enhance clarity of speech.

A complement to softwall rather than an alternative, thinwall is not freestanding—instead it integrates additional furniture or structures into an aesthetically cohesive environment when used as a wrap for shelving or other structures.

The brown and blue paper materials are made from wood harvested from FSC® Certified (FSC® C158591) responsible sources and coated with a non-toxic fire retardant. Both paper and textile versions of thinwall are 100% recyclable.

The white textile version can be backlit with a flexible LED ribbon to transform the space liner into a sculptural light fixture.
